

Product Characteristics

- An n-tier application hosted in a hybrid environment (Citrix based private data centre + AWS).
- The platform has a set of components developed in Java and deployed as war and jar files.
- MySQL is used as the data repository for the platform. Most of the application logic resides in the database.
- Redis is used for caching.
- Kafka is used as the messaging system for the platform.

Development & Deployment Environment

- CVS used as the code repository.
- JIRA used as the ALM tool.
- Dev environments were local to developers.
- Test environments are hosted in AWS. Staging and Production environments are hosted in the Citrix based private data centre.
